About me

I am Sarah Al-Shater, in the fifth year of study at Al Al-Bayt University, majoring in architectural engineering.
My passion for architecture and its fields had increased dramatically since the first year of studying Architectural engineering.
And the best statement that I feel represents my passion for architecture is: we architects make space the best it can be in three dimensions.
I have taken many specialized external courses in the field of architecture, such as Revit, Photoshop, Lumion, and architectural programs in general.
I have the ability to acquire new skills and communicate while working. Also, I can work individually and collectively.

Jerash Down Town

3

project brief

location : Jerash, Jordan

This project is located within the city center of Jerash on Wasfi Al-Tal Street. The city previously lacked accommodation and hotels for tourists, and based on the importance of providing hotels in tourist places, this project was established to contribute to the revitalization of tourism in the center of Jerash

Project Description

The stages of design development for a hotel are commensurate with the Jerash environment, we put among your hands some of the attempts that preceded the final design. The progress that took place here is a mixture between modern designs and historical civilization to reach the final design that you see now To fit with 2021.
